Abstract

The control of livestock is one of the main factors that needs to be considered by the village government, because the presence of livestock that has been roaming freely in the Bangunemo Village area and has damaged yards, plants, plantation/agricultural products and disrupted road traffic, thus creating disputes between fellow residents which has an impact on disrupting public order and tranquility. This research was conducted in Bangunemo Village with the aim of determining the extent of the Village Government's efforts in carrying out its duties and responsibilities as a good government in enforcing the control of livestock in Bangunemo Village. Data collection methods used, Observation, Questionnaire and Documentation. The types of data sources used are primary data and secondary data. the population of the researcher is the Bangunemo village community totaling 276 people. The sampling technique in this study uses the Slovin formula using a purposive approach to make it easier for researchers to research and the number of samples in this study is 38 people. The data analysis used is qualitative descriptive analysis which includes processing, data explanation and drawing conclusions. The results of the study variable (X) Village Government Efforts with an average of 64%, and variable (Y) Livestock Control in Bangunemo Village with an average of 73%. So $64 + 73 = 137 : 2 = 68\%$, it is concluded that the Village Government's Efforts in Enforcing the Order of Livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency were carried out well with a percentage of 68%.

Keywords: Community Development; Livestock Control; Village government;

1. Introduction

One form of public order is the implementation of order regarding livestock carried out by the community. This is done to avoid negative impacts arising from disorderly animal keeping among the community. For example, the roaming of livestock in community settlements causes a lot of animal waste in community yards or inside people's homes, which can cause several diseases or odors from livestock in the community, which can also affect community health, (Kuswoyo et al. 2022). Livestock owners should not leave their livestock unsupervised because this could risk causing harm to other people, as well as causing unpleasant odors and their droppings as a source of disease germs. Therefore, it is necessary to pay attention to the arrangement and maintenance. Livestock roaming in public places such as highways and football fields because they are not tied or caged by their owners, thus disturbing the comfort of the community, (Pega et al. 2022); (RJ, Syahrudin, dan Nurfaizah 2023).

In order to create a peaceful and orderly city/village structure and provide protection to the community, it is necessary to organize, maintain and control livestock which can disrupt or influence community life activities

Creative Commons Attribution-ShareAlike 4.0 International License:

<https://creativecommons.org/licenses/by-sa/4.0/>

in order to create security and comfort from roaming livestock, (Testriono dan Schraufnagel 2020); (Syamsiar I. Mahmud 2022). Order and tranquility are important keys to achieving social welfare as mandated by the Preamble to the 1945 Constitution of the Republic of Indonesia, Paragraph IV, because without the establishment of order and tranquility in people's lives, it is difficult to achieve a just and prosperous society as envisioned in Indonesia's national goals, (Ethika dan Triani 2022).

Bangunemo Village as a village is obliged to maintain the cleanliness, guarding and security of this village, and one of the causes that disturbs the cleanliness, security and guarding of the village is the disturbance of livestock on public roads, office yards, people's houses and agricultural locations which is very disturbing to the public. Apart from being prohibited from roaming around, its maintenance must be controlled by the village government and is a joint responsibility between the village government and the community, (Fusi, Zhang, dan Liang 2022); (Siregar, Irmayani, dan Sari 2023).

To provide comfort and justice to the community, the Bangunemo Village Government issued Bangunemo Village Regulations, Banggai Islands Regency Number 1 of 2019 concerning Control of Livestock. The Village Regulations referred to are not just implementing regulations for the laws above, but more than that they must be able to absorb and accommodate the special conditions of the village for village independence and the aspirations of the local community.

In reality, the enforcement carried out by the Bangunemo Village Government has not yet been implemented, because there are facts that in the field there are still many livestock animals such as pigs, goats, cows, etc. roaming freely in public facilities. So, the roaming of livestock creates a less clean environment and inconvenience for people in their activities. Therefore, seeing these conditions, the author is very interested in researching in more depth regarding the Village Government's Efforts in Enforcing Control of Livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency.

2. Method

In collecting data the author used three data collection techniques, namely observation methods, questionnaires and documentation, (Amane dan Laali 2022); (Kusumawati et al. 2023); (Alaslan et al. 2023). Types and sources of data using primary data and secondary data, (Rahman et al. 2022); (Amane et al. 2023). The population in this study were 276 people in Bangunemo Village. By seeing that the population is too large, only part of the population is sampled using the Slovin formula, (Wekke Suardi 2019); (Arifin et al. 2024) as follows:

$$n = \frac{276}{1 + 276 \times (15\%)}$$

$$n = \frac{276}{1 + 276 \times (0,15)^2}$$

$$n = \frac{276}{1 + 276 \times 0,0225}$$

$$n = \frac{276}{7,21}$$

$$n = 38$$

Because the population is very large, the researcher carried out sampling by taking representatives, namely people who were deemed able to explain the main problems in Bangunemo Village using a purposive sampling approach, (Mila Sari et al. 2023); (Wajdi et al. 2024).

This research uses a Likert scale, which is an assessment method to provide a subjective evaluation regarding the community's response to the Bangunemo Village Government's efforts to enforce control over livestock, (Subakti et al. 2023); (Razali et al. 2023); (Agit et al. 2023).

To determine the category of respondents' responses to each indicator in this study, the score interpretation criteria in 5 intervals were used as follows: (Alfaris et al. 2023); (Kamaruddin et al. 2023); (Muslimin et al. 2023)

Table 1 Answer Size Scale

<i>Weighting Method</i>	Interval Class	Evaluation
5	86% - 100 %	Very good
4	66% - 85%	Good
3	46% - 65%	Adjective

2	26% - 45%	Not good
1	0% - 25%	Very Not good

The formula used to determine the percentage of respondents' responses is then used as the basis for determining the position of the criteria for interpreting the value of a statement or question. Then the data is analyzed based on frequency (number of respondents), calculated using a formula: (Kaluku et al. 2023); (Amane et al. 2023)

$$P = \frac{F}{N} \times 100 \%$$

Information:

P = Persentase

F = Frequency

N = Number of Samples

Furthermore, data processing in this research is a descriptive qualitative data analysis technique by interpreting the scores obtained, so that conclusions can be drawn from the research results, (Halirat et al. 2023).

3. Results

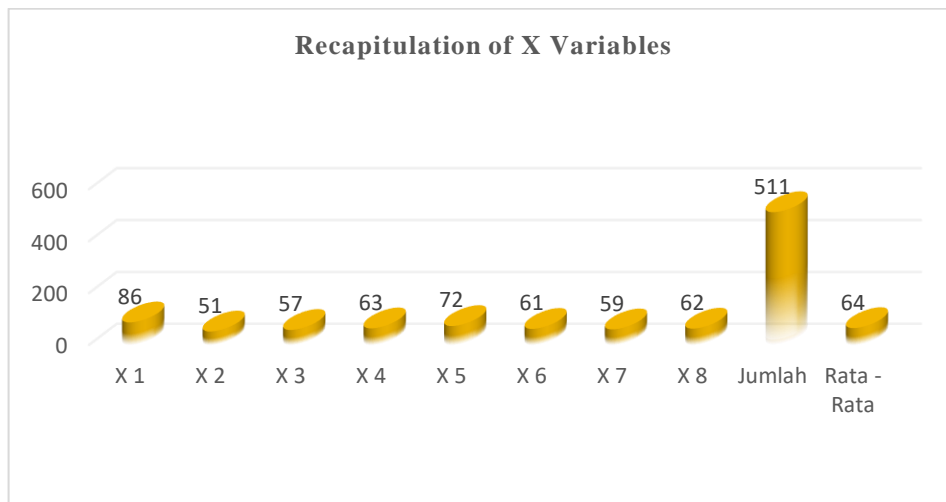

The Village Government is the Village Head or referred to by another name, assisted by the Village apparatus as an element of the village government organizer. In Law Number 6 of 2014 concerning Villages, it explicitly gives tasks to the village government, namely organizing government, implementing development, community development, and community empowerment based on Pancasila, the 1945 Constitution of the Republic of Indonesia, and Bhinneka Tunggal Ika, (Sugiman 2018). The village government consists of the Village Head or other terms assisted by Village Apparatus as elements of the Village Government administration, namely the Village Secretary, Hamlet Head, and Head of Affairs, (Setyowati 2019). The village government is given the authority to have the right to organize its own government affairs according to the characteristics of each village, which means that the village is an autonomous region that will be responsible to the Regent or Mayor, (Setyowati 2019).

Order is a process of an implementation process that is made, where in the order it refers to the welfare of the community. An orderly and peaceful environment is the ideal and hope of every community why the order process is carried out. And order is a binding provision to create orderly and good environmental conditions, (Zamani dan Yogia 2015). This disciplinary activity can be in the form of direct and indirect disciplinary activities. But what needs to be considered if the disciplinary action is carried out through a legal enforcement mechanism process that is carried out in accordance with applicable and established regulations, (Damara 2020). Livestock are animals that are deliberately raised and bred for human consumption as a source of food, a source of raw materials for industry, or as assistants to human work, (Neno et al. 2022). However, with livestock roaming around in residential areas, it causes a lot of animal waste in people's yards or gardens, which can cause several diseases or unpleasant odors from the livestock in the community, which can also affect public health. Livestock which is one of the sources of livelihood for the local community will have a good and positive impact if it is managed regularly and orderly. However, it causes social problems when livestock are released into the wild by the owner or the person who is given the task of caring for them, (Maspada, Tjaija, dan Alamsyah 2019). The regulation of livestock must of course be carried out with the established procedures. This procedure is carried out so that farmers are not economically disadvantaged and legally the regulation can be accounted for by the regulation officers, (Kuswoyo et al. 2022). Order and peace in society are things that are highly desired by both state administrators, in this case the government, and by society itself, and in order to realize order and peace, this certainly cannot be separated from the contribution of public services, namely Satpol PP in collaboration with other law enforcement officers, (Jumadi, Jaya, dan Hartawati 2022).

4. Discussion

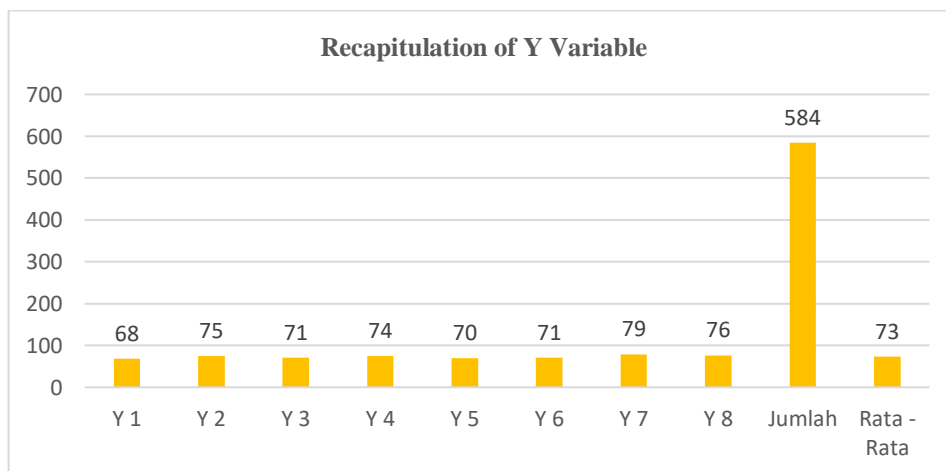

The "Discussion" part, highlights the rationale behind the result answering the question "why the result is so?" It shows the theories and the evidence from the results. The part does not just explain the figures but also deals with this deep analysis to cope with the gap that it is trying to solve. It is important to state the possibility of contribution result of the research for science development.

Table 2 Recapitulation of respondents' answers to variable (X) Government Efforts

The efforts of the Bangunemo Village Government, North Bulagi District, Banggai Islands Regency can be concluded that they fall into the less than good criteria. From the results of the study assisted by the results of respondents' answers to the questionnaire distribution, it is quite varied, meaning that the answers are respondents' answers based on what is experienced or seen and felt by the respondents. The results of the respondents' responses show that the variable (X) of the efforts of the Bangunemo Village Government, North Bulagi District, Banggai Islands Regency, has an average of 64% or is not good.

Table 3 Summary of respondents' answers to the variable (Y) Livestock Control

Animal Control in Bangunemo Village, Bulagi Utara District, Banggai Islands Regency can be concluded that it is in good criteria. From the results of the study assisted by the results of respondents' answers in the distribution of questionnaires, it is quite varied, meaning that the answers are respondents' answers based on what is experienced or seen and felt by the respondents. The results of the respondents' responses show that the variable (Y) Livestock Control in Bangunemo Village, North Bulagi District, Banggai Islands Regency has an average of 73% or good criteria.

From the respondents' responses above, the variable (X) Village Government Efforts had an average of 64%, and the variable (Y) Livestock Control in Bangunemo Village, North Bulagi District, Banggai Islands Regency had an average of 73%. So $64 + 73 = 137 : 2 = 68\%$, it is concluded that the Village Government's Efforts in Enforcing the Order of Livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency were carried out well with a percentage of 68%.

5. Conclusion

Enforcement of livestock control in the Banggai Islands Regency area is an important process that involves institutions and parties that work together, for example the village government, to ensure that livestock maintenance is in accordance with the regulations that have been set or not. The control of livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency is very necessary to be realized in order to maintain the welfare of the community and also protect the environment such as house yards, and also small areas of land in the village environment to avoid damage caused by the presence of livestock still roaming around.

The efforts of the Village Government in Enforcing the Control of Livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency, have not been fully implemented properly, the village government here is still weak in enforcing village regulations which are not firm so that people can violate the rules without consequences and also cause community compliance with regulatory guidelines to be very low. Factors that influence the hampering of efforts to enforce livestock control include (1) Lack of socialization by village governments regarding livestock control. (2) Lack of supervision by village governments regarding livestock control.

From the results of this study, the researcher can draw the conclusion that there are efforts by the Village Government in enforcing the control of livestock in Bangunemo Village, North Bulagi District, Banggai Islands Regency, but the less than optimal efforts to control livestock are caused by the lack of a sense of responsibility of the village government itself so that the form of village regulations is only arranged in the form of programs that are not implemented.

6. Acknowledgment

Thanks are extended to the village government that has given permission and supported the research activities as well as the entire community that was involved and actively participated in providing information. We would also like to express our special thanks to the informants who were willing to be respondents and fill out the questionnaire.
